

Milestone2 Summary

1. Since we started implementation in this milestone, all the code on GitHub were newly added.
2. No new user story was added in this milestone.
3. New functionalities were added according to the product owner's(tutor) requirement during weekly lab meeting. They are
 - User could make a booking without login.
 - Admin could edit and delete employee in admin page.
 - Admin could edit the work time of employee.

Those tasks were in our product backlog and product owner's(tutor) wants us to implement those first.

4. Config.yml is under the .circleci folder on GitHub.
5. All the APIs that support those functions are in *API document* in the submission and the backend deployed on AWS. (Can be tested via <http://54.210.18.102:8080/api/employee>)
6. The frontend deployed on AWS well, you could visit it via <http://34.207.143.47/>
